Regional Innovation(labs) Circular Economy

Our Challenge: Leading to continuous action

The Circular Economy challenges regions to make the transition from linear to circular thinking. Every step in the innovation process including the difficult ones (scalability, communication, social structure) involves learning. Reflecting, capturing and codifying learning moments on a regional level is required to move from theory to effective reality. Framing the Circular Economy requires regional articulation, requiring focus and participation. We envision the on-going development of successful practices as a network of eco-systems driving change at the regional level.

Our Objective: Connecting Insight

Build networked Regional Innovation (labs) in the circular economy as an ecosystem for real change. Exchange best practice to accelerate action for public, and private faced with a shared goal to work together.

Cooperation with Regions

When you tell others your experience, you also learn. Exchanging ideas and experiences between regions makes cultural differences and parallels visible. We hope to generate a toolbox while highlighting the importance of the unique regional narrative. 'Regional Innovation Ecosystems' (Committee of the Regions) is our starting point. Systems thinking is our second focal point. The transnational approach builds a strong knowledge base. Connecting regions because climate change does not stop at 'the border'.

Types of partners:

We invite regional networks consisting of private and public actors, prepared to share their dreams and their practical hurdles, and who recognize that a shared support system will help accelerate success.

Our contact details

Name	Douwe Jan Joustra, Susan Stuebing, Cees Anton de Vries
Organisation	ICE (Implement Circular Economy)
Region	Amsterdam
Country	The Netherlands
Telephone number	31 613195968 or 31 628218454
Email	djj@ice-amsterdam.nl sst@origame.eu
Website	www.ice-amsterdam.nl and www.origame.eu
